2005

Construction Cost

\$750,000

DMA Services Provided

Architecture

Structural Engineering

David Mason & Associates designed a new pool building that supports a free flowing, open, safe and secure facility. The design incorporates a manager's office, check-in area, and pool equipment storage on the south side of the facility. On the north side of the facility there is a men's locker room and showers, as well as a women's locker room and showers. The design also incorporated separate and secure boys and girls restrooms in addition to the men's and women's facilities.
