

Missouri River WWTP And Coldwater Creek WWTP Secondary Expansion

Metropolitan St. Louis Sewer District (MSD)

Location

St. Louis, Missouri

Completion

2007

Construction Cost

N/A

Services

Structural Engineering

This project consisted of a predesign study and report for expansion of the disinfection and secondary treatment facilities at Missouri River Wastewater Treatment Plant. This was in preparation for final design services for possible plant expansions.

David Mason & Associates performed structural consulting, condition assessments, and feasibility studies for the possible expansion of the facility. This included estimation of remaining useful life span, and evaluation of possible reconfigurations of existing structures.
